

THE WATERBORNE SOLUTION

Episode One: The Missing Emissions

"An Actual Case From the Files of Detective Doug Dennett, Fighting Rust and Corrosion With Tectyl's Latest, Safest and Most Economical Technology."

I was trying to figure out how a fly ever got into this hermetically sealed building. The heck with how he got in, I thought, how am I going to get him out?

The phone rang. "Dennett."

"Ya gotta help me, Doug!" the frantic voice pleaded. "OSHA's all over me like flies on..."

"Flypaper?" I interrupted.

"Yeah," he said, "It's my rust preventive coating operation. They say I've got high emissions, high flammability... Man, you should see this

citation they just handed me. It's bigger than the Manhattan phone directory!"

"Where have you been, Joe?" I asked him. "A muffler and tailpipe manufacturer out your way had the same problem, till we put Tectyl® Waterborne in there. We not only got his emissions down, we got him into a pigmented Tectyl that gives him a better looking product."

"Hey, that'll work for me, too."

"You switch to Tectyl Waterborne," I assured

him, "and you can use that OSHA citation for swatting flies."

"Swatting flies?"

"I'll send you my file on the muffler case," I said, and hung up.

As I pulled the file from my cabinet, my uninvited roommate made the mistake of landing on my desk lamp.

I'll have to requisition a new lamp, I thought. And I hope Joe doesn't mind a crinkled file folder.
